

Our Impact

Description

[Home](#) â?¹

Global Collaboration â?? Our partnerships span continents, bringing together top minds and cutting-edge research to tackle emerging threats in animal health. By coordinating international efforts, we ensure that resources and knowledge are shared, accelerating the development of innovative solutions to protect animal and human health.

Tackling Emerging Diseases â?? We focus on research that addresses both endemic and emerging diseases, recognizing that animal health is intricately linked to human health. Our work contributes to the prevention and control of zoonotic diseases, reducing the risk of pandemics and safeguarding public health.

Ensuring Food Security â?? As the global population continues to grow, ensuring food security is more critical than ever. Our efforts in improving animal health directly contribute to a stable and sustainable food supply. By promoting healthy livestock and innovative agricultural practices, we help secure the availability of safe and nutritious food for communities worldwide, addressing the challenges of feeding a growing population.

Driving Innovation â?? Our research initiatives drive innovation in diagnostics, vaccines, and treatment strategies, providing the tools necessary for effective disease control. We support the development of new technologies that improve animal health, reduce the need for antibiotics, and promote sustainable agricultural practices.

Influencing Policy and Practice â?? Our research informs policy at both the national and international levels, guiding decision-makers on issues related to animal health and welfare. Through our work, we advocate for science-based policies that protect animals, people, and the environment.

By focusing on these areas, STAR-IDAZ is making a meaningful impact on the future of animal health and welfare. We are not just advancing science; we are creating a healthier world for animals and people alike. Here are some stories that illustrate our impact:

Impact Case Studies

[Foot and mouth disease](#)

[**Collaborative Research Driving Innovation**](#)

INTA Argentina and the USDA have partnered to tackle pressing issues in animal health, co-funding five innovative research projects.
