Objectives

The overall objective of the STAR IDAZ IRC is to coordinate research at the international level to contribute to new and improved animal health strategies for at least 30 priority diseases/infections/issues.

The aim is to accelerate the development of candidate:

- Vaccines
- Diagnostics
- Therapeutics
- Scientific information to support risk analysis and disease control

Approach and Structure

Working Groups, consisting of researchers and subject experts, are guided by a Scientific Committee to perform research gap analyses and critical path analysis to produce research “roadmaps”.

The Scientific Committee, consisting of independent experts, present the roadmaps to the IRC partners and advise them on how their programmes might be aligned to address the priority gaps.

[Organisational Structure](#) [Priority Topics](#)

The impact we’re having

Reducing duplication of research effort and encouraging information sharing

Facilitating research gap analysis including the provision of literature reviews for working groups, maps funding activities against identified research needs, and helps mobilise resources to address them.
